

Cerebrovascular Ultrasound In Stroke Prevention And Treatment: A Comprehensive Guide For Healthcare Professionals

Stroke is a leading cause of death and disability worldwide, affecting millions of people each year. Cerebrovascular ultrasound is a non-invasive imaging technique that allows us to visualize the blood vessels in the brain and neck. It is commonly used in the evaluation of patients with suspected or known cerebrovascular disease. Cerebrovascular ultrasound can provide valuable information about the structure and function of the blood vessels, and it can help us to identify patients at risk for stroke.
