

Unlock the Secrets of Spacecraft Modeling: Attitude Determination and Control

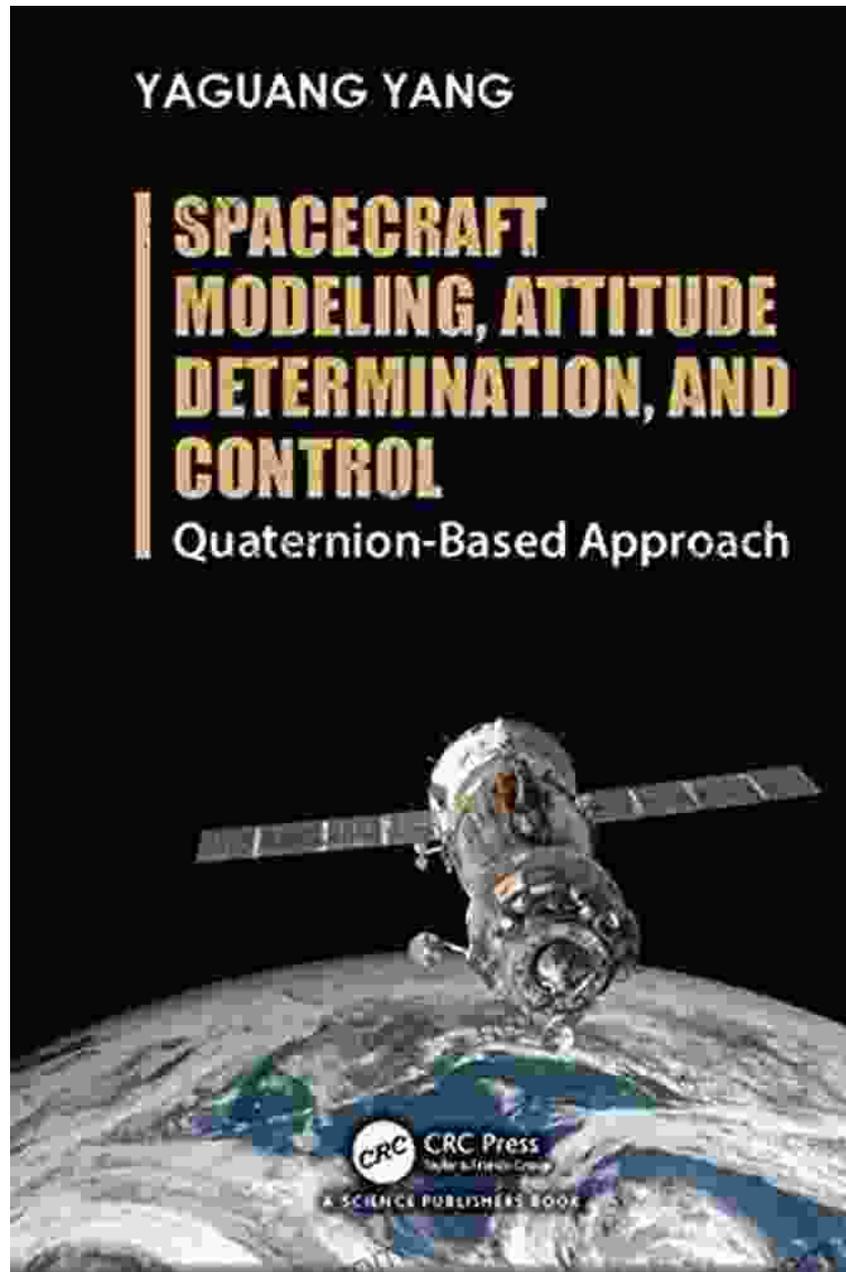

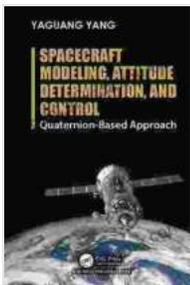

Table of Contents

-
- Attitude Determination

- Methods
- Sensors
- Attitude Control
 - Actuators
 - Algorithms
- Applications
-

Spacecraft modeling, attitude determination, and control are critical aspects of space exploration and satellite operations. This comprehensive book provides a thorough understanding of these fundamental concepts, enabling professionals and students to confidently design, simulate, and control spacecraft. Delving into the latest advancements, it offers a comprehensive guide to the dynamic and challenging field of spacecraft modeling and control.

Spacecraft Modeling, Attitude Determination, and Control: Quaternion-Based Approach

★★★★☆ 4.5 out of 5

Language : English

File size : 17721 KB

Print length: 340 pages

Attitude Determination

Methods

This section explores various attitude determination methods, including:

- Sun sensors - Earth sensors - Star trackers - Inertial navigation systems - Global positioning systems

Each method's strengths, weaknesses, and applications are подробно изучены.

Sensors

A detailed analysis of attitude determination sensors is presented, covering:

- Optical sensors (e.g., sun sensors, star trackers) - Inertial sensors (e.g., accelerometers, gyroscopes) - Magnetic sensors - GPS receivers

Attitude Control

Actuators

This section examines attitude control actuators, including:

- Reaction wheels - Control moment gyroscopes - Thrusters - Magnetic torquers

Their principles of operation, performance characteristics, and advantages and disadvantages are подробно изучены.

Algorithms

Various attitude control algorithms are discussed, such as:

- Proportional-integral-derivative (PID) control - Linear quadratic regulator (LQR) control - Nonlinear control - Robust control

The book provides a comprehensive comparison of these algorithms and guidelines for their implementation.

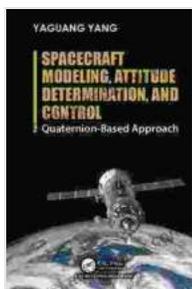

Applications

The book concludes by presenting practical applications of spacecraft modeling, attitude determination, and control in various domains, including:

- Orbit insertion and maintenance - Attitude stabilization - Pointing control - Maneuver execution

"Spacecraft Modeling Attitude Determination And Control" is an invaluable resource for professionals and students in aerospace engineering, control systems, and related fields. It provides a comprehensive understanding of the fundamental principles and latest advancements in spacecraft modeling and control, equipping readers with the knowledge and skills to successfully design, simulate, and control spacecraft.
